

How to login.

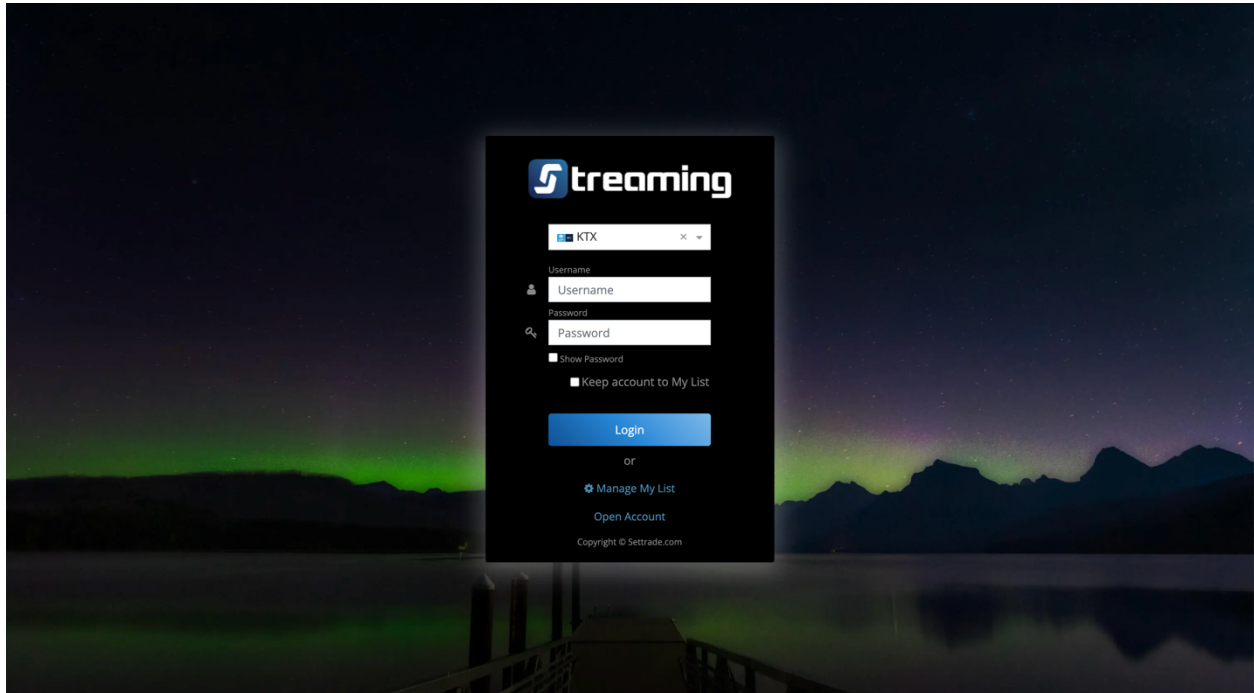

Figure 1: Login page.

<https://streaming.settrade.com/realtime/streaming-login/login.jsp>

Step 1: Click the link at the top to enter the website, as shown in Figure 1. In the first field, select “KTX”. Enter “xxxxxx” in the username field and “xxxxx” in the password field, then click “Login”.

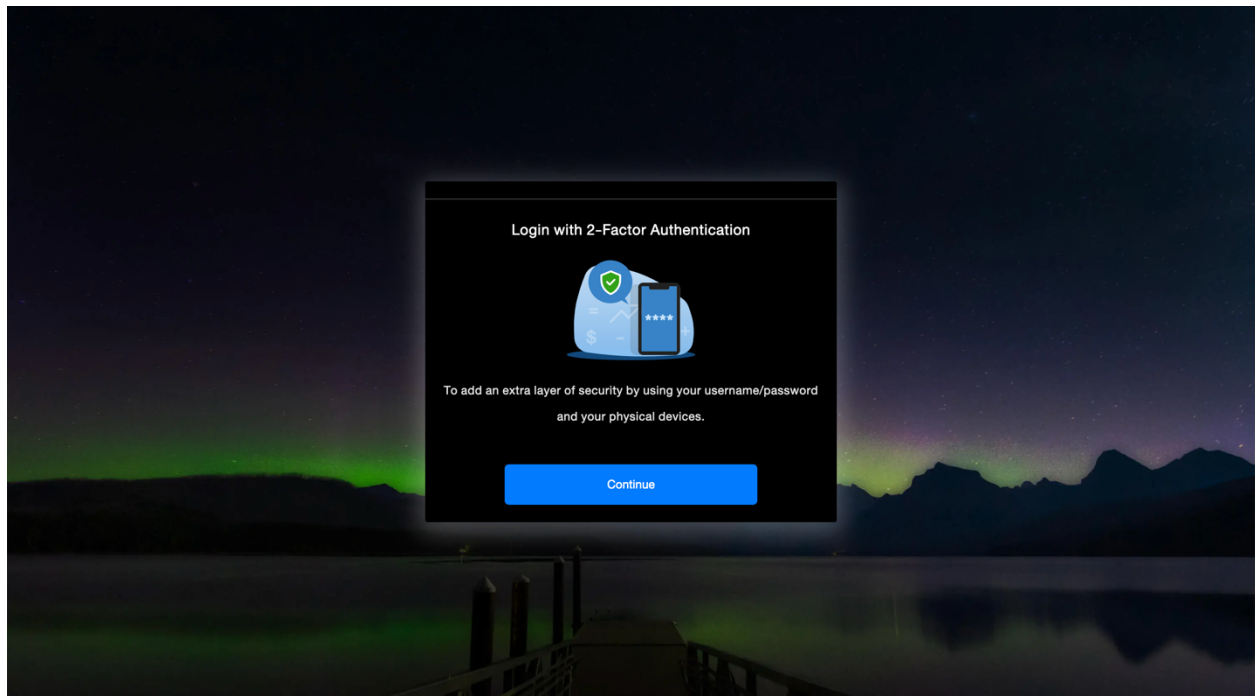

Figure 2: Login with 2- Factor Authentication.

Step 2: This step involves identity verification. Click "Continue" and proceed to Step 3.

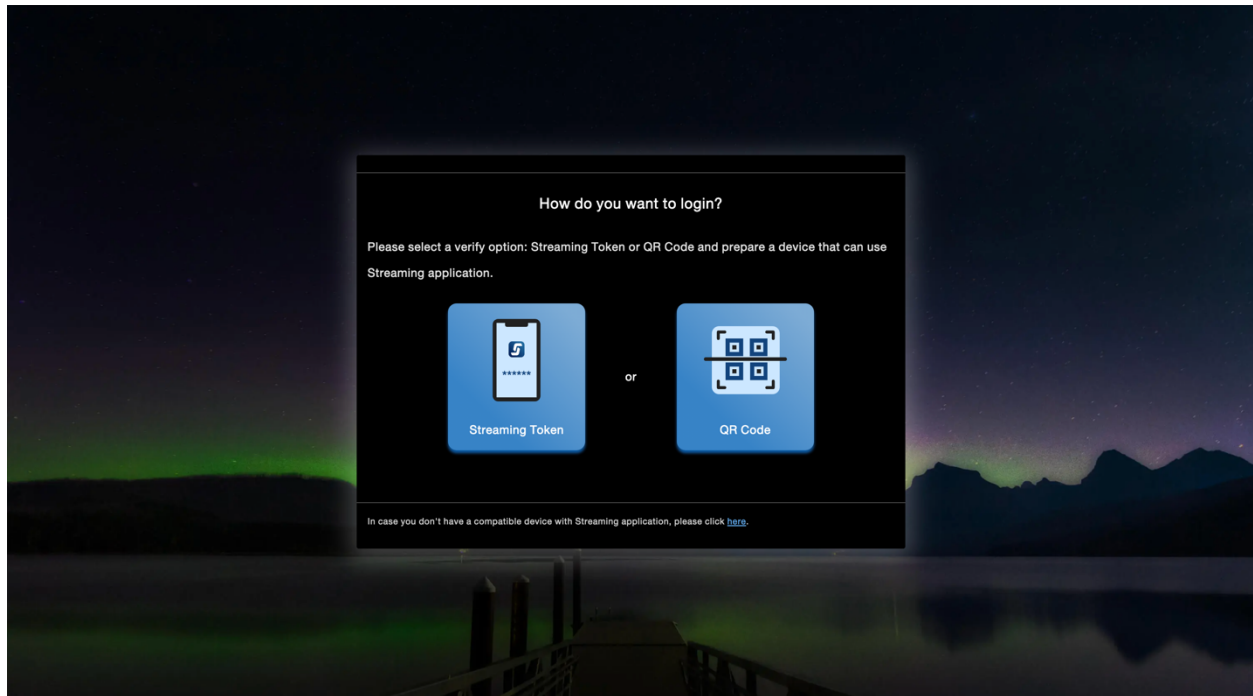

Figure 3: Select identity verification.

Step 3: For identity verification, select the QR Code option on the right. Then send the obtained QR Code to email or, if more convenient, you can add me on WhatsApp.

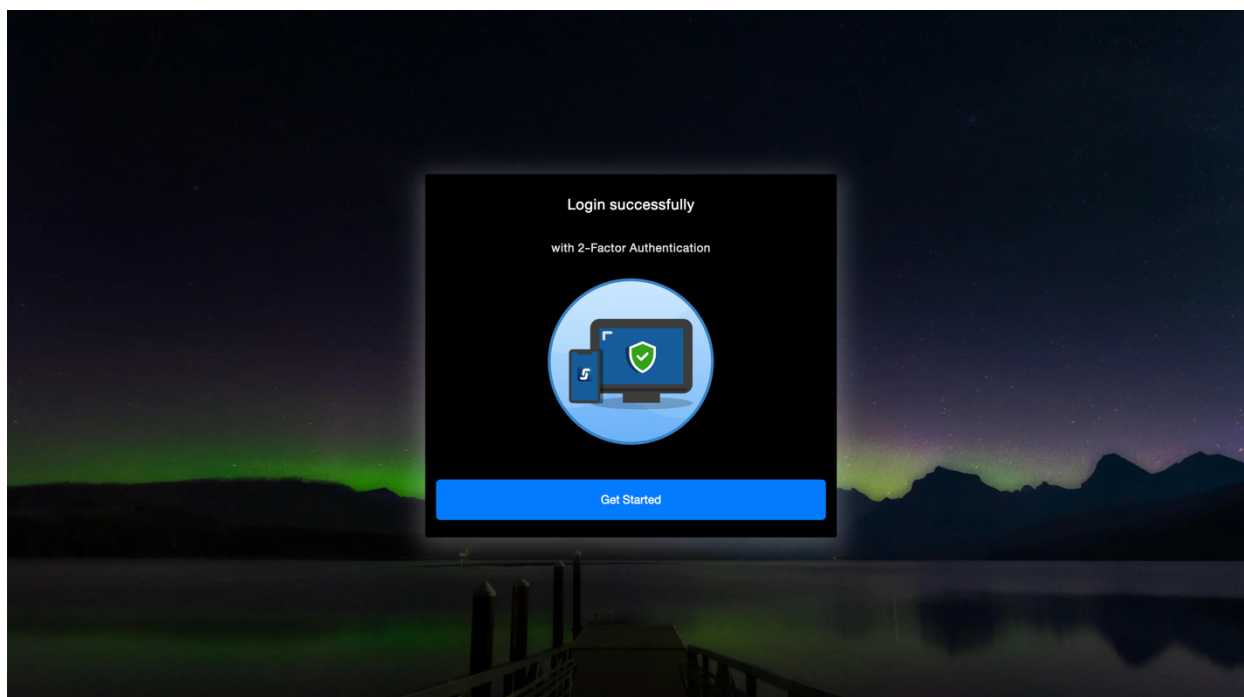

Figure 4: Login successful.

Step 4: After successful identity verification, click “Get Started”.

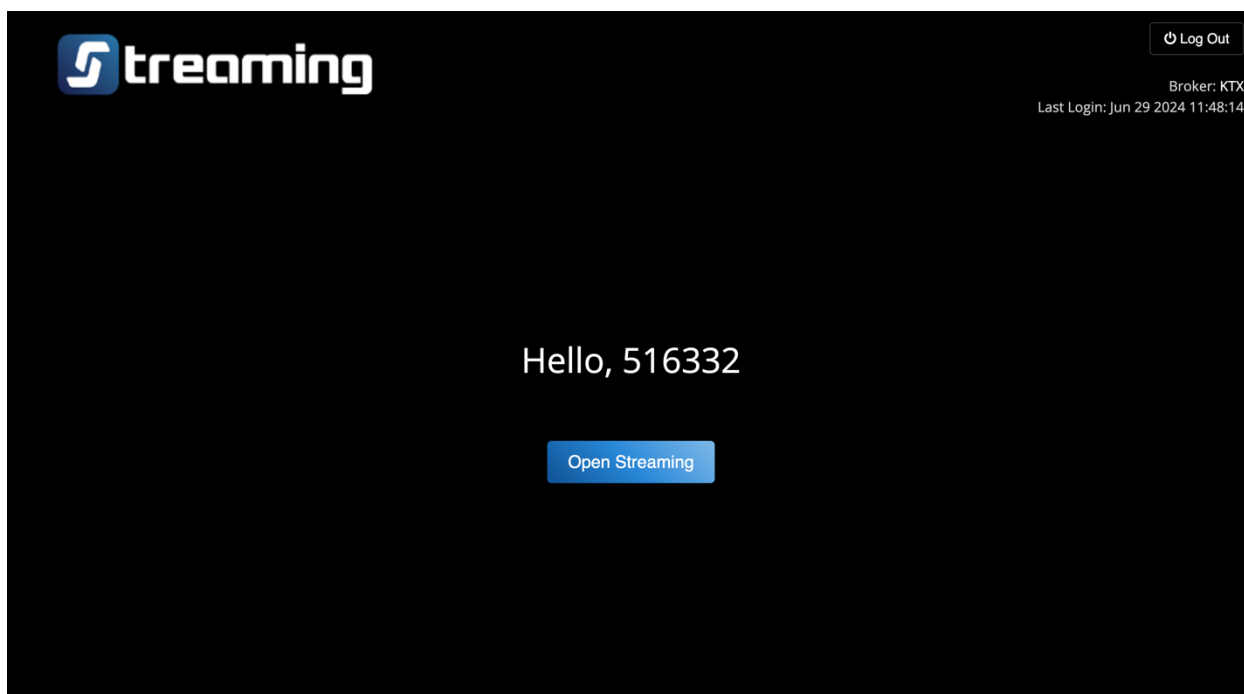

Figure 5: Start trading.

Step 5: Click “Open Streaming” to enter the trading market.

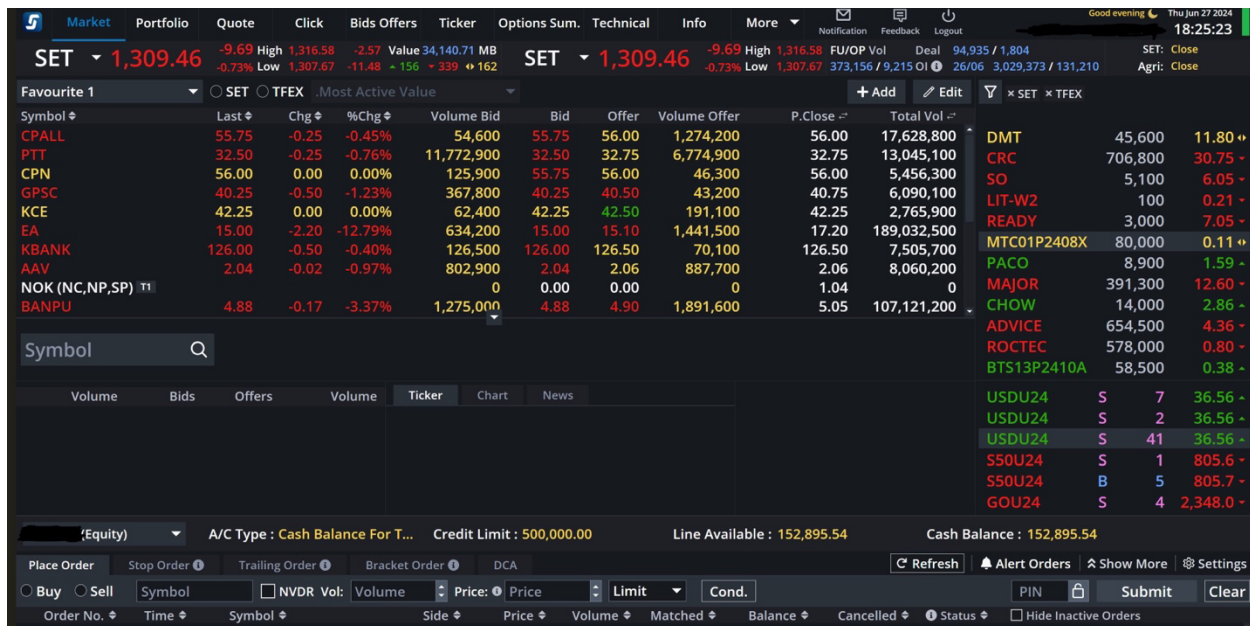

Figure 6: Trading market interface.

This is the interface of Thai stocks after logging in.

What I want?

1. Create a program that send the buy/sell orders as quickly as possible that should be faster than figure 7.
2. The website provides an API, but it's not fast enough. Can you create a program that receives commands from us and then executes the buy or sell orders faster than the API provided by the website?

Example time per request.

```
[2020-06-29 12:29:58.032]  
[2020-06-29 12:29:58.232]  
[2020-06-29 12:29:58.232]  
[2020-06-29 12:29:58.432]  
[2020-06-29 12:29:58.633]  
[2020-06-29 12:29:58.635]  
[2020-06-29 12:29:58.636]  
[2020-06-29 12:29:58.834]  
[2020-06-29 12:29:58.834]  
[2020-06-29 12:29:59.032]  
[2020-06-29 12:29:59.033]  
[2020-06-29 12:29:59.235]  
[2020-06-29 12:29:59.236]  
[2020-06-29 12:29:59.434]
```

Figure 7: Example requests time.

You can see the times the Figure 7, Each command is sent out every few milliseconds.
